

Question 1

```
1. Let employeeName = prompt("Enter employee name:");
Let hoursWorked = parseFloat(prompt("Enter hours worked:"));
Let ratePerHour = parseFloat(prompt("Enter rate per hour:"));

2. Let basicPay = hoursWorked * ratePerHour;
Console.log("Basic Pay:", basicPay);
Let tax;

3. If (basicPay > 50000) {
    Tax = 0.2 * basicPay;
} else if (basicPay >= 20000 && basicPay <= 50000) {
    Tax = 0.1 * basicPay;
} else {
    Tax = 0;
}

4. Let netPay = basicPay - tax;
```
